

USHA FENESTRA SYSTEMS PVT LTD

“The Premium Windows & Doors Systems”

About Us

Incorporated in 2007, Usha Fenestra Systems Private Limited (Ushawin) is among the experienced manufacturers of high quality uPVC door & window systems for residential, commercial and industrial applications. Operating from a modern and highly equipped manufacturing/engineering facility located in RIICO Industrial Complex, Bhiwadi (NCR), our versatile product range has placed us at the forefront of providing solutions for a wide range of uPVC door & window systems.

Ushawin door & window systems are available in range & style to suit all types of built environments including residential houses, villas, offices, farm houses, hotels & restaurants, hospitals & nursing homes, factories & sales outlets, educational institutions, commercial complexes and high rise apartments etc.

After successfully and continuously operating for more than a decade, Ushawin products have become a trust of quality, aesthetics, practicality, comfort and convenience.

Each and every Ushawin door or window is made to measure to fit precisely and perform perfectly.

Why USHAwin?

1. "DELIVERY ON TIME"

We always make our deliveries as per commitment. Therefore most of our clients call only us for their future requirements and recommend us to their friends & relatives i.e. our client never switches to any other manufacturer.

2. "UP TO THE MARK INSTALLATION"

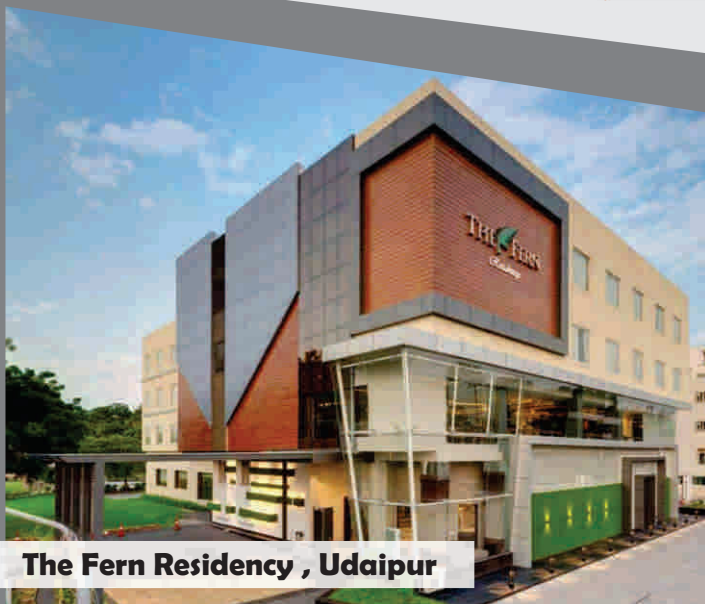

Our installation team is the best and **most experienced** amongst the industry.

3. MEMBER OF UWDMA

We are a worthy member of UWDMA (UPVC Windows and Doors Manufacturing Association) and follow S.O.P devised by UWDMA.

4. ROHS COMPLIANT PROFILES

We use ROHS compliant lead free profiles.

uPVC

Unplasticized Poly Vinyl Chloride (uPVC) used in frames of doors and windows is one of the most sustainable building materials. It can be used in harsh environment as it is resistant to every day pollutants and chemical fumes and gases. It requires 38-40% oxygen for combustion/burning. It would, therefore, self extinguish once the fire source is removed. The material is also made UV stable by some additives which means that it would not fade under constant hot /scorching sun. It is recyclable and bad conductor of heat and electricity. Thus, uPVC framed door and window systems not only reduce carbon emissions but also deliver significant savings to the building owner. They are fast replacing wooden doors and windows and thus reducing environmental impacts by conserving forests.

Window Features

>> Fire Safe

>> Excellent Weather Resistant

>> Effective Sound Proofing

>> Excellent Thermal Insulation

>> Air Tight

>> Termite Proof

>> Minimal Maintenance

>> G.I Reinforced

>> Maximum Water Tightness

>> Wide Range Of Glass Options
